Maximum and average rolling returns are reflective of the data that was available to us when this flier was created. Returns for last seven years assume that, for the entire seven-year period, clients held a Great American Life® fixed-indexed annuity, allocated 100% of their funds to applicable strategy for each one year term and terms coincided with calendar years. Indexed interest rates for the strategy are based on changes in the index over one-year terms, which are not based on calendar years but begin on the 6th and 20th of a month. The information presented above reflects hypothetical participation rates and caps, which are not guaranteed rates. The actual participation rates and/or caps that we might have applied during this period would have been different and might have been significantly lower. A purchase payment greater than \$100,000 may be required to receive illustrated rates.

The S&P 500 Risk Control 10% Index refers to the S&P 500 Average Daily Risk Control 10% USD Price Return Index. The launch date of this index was April 4, 2013. For more information, visit www.US.SPIndices.com and search keyword SPXAV10P. Returns prior to the index launch date are back-tested. Back-tested performance is not actual performance, but is hypothetical. Back-tested returns were calculated using the same methodology that was in effect when the index was officially launched. Back-tested performance is subject to inherent limitations because it reflects application of an index methodology and selection of index constituents in hindsight. No theoretical approach can take into account all of the factors in the markets in general and the impact of decisions that might have been made during the actual operation of an index. Past performance does not guarantee future results. Back-tested index returns are not indicative of the interest that would have been credited to a fixed-indexed annuity during the same time period.
