### ....MassMutual Ascend

## Index Summit<sup>®</sup> 6 Pro

### OVERVIEW

ISSUE	0-80 (qualified); 0-80 (non-qualified); 0-75 (inherited IRA); 0-75 (inherited non-qualified)						
AGES	Issue age is the owner's age at last birthday. For joint owners, the oldest age will be used as the issue age. If the owner is a non-natural person, the age of the eldest annuitant will be treated as the age of the owner for all purposes under this contract.						
PURCHASE PAYMENTS	This product accepts a single purchase payment for the following tax qualifications:						
	<ul> <li>Non-qualified and inherited non-qualified</li> </ul>						
	<ul> <li>IRA (traditional, Roth, SEP, SIMPLE, and inherited)</li> </ul>						
	<ul> <li>401(a) (including 401(k) traditional and Roth)</li> </ul>						
	• 403(b) (traditional and Roth)						
	<ul> <li>Governmental 457(b) (traditional and Roth)</li> </ul>						
	Additional purchase payments allowed during the first two months of the contract only. Terms begin only on the 6 <sup>th</sup> and 20 <sup>th</sup> of each month. Purchase payments received prior to the beginning of a term will be held in the purchase payment account until the beginning of the next term. Additional purchase payments have their own crediting terms.						
	Minimum: Initial purchase payment: \$25,000; additional purchase payments: \$10,000						
	Maximum: \$1 million for ages 0-80						
	Maximum applies to the total purchase payments made to all annuities from MassMutual Ascend with the same owners or the same annuitants.						
FEES	A fee is deducted from each strategy on a daily basis and compounds to an effective annual rate of 0.75%. The fee for any given day is calculated as a percentage of and is subtracted from the then remaining investment base of an indexed strategy.						
ACCOUNT VALUE	The account value equals the sum of the following values:						
	<b>Purchase payment account value:</b> The purchase payment account value equals the purchase payments received, less any applicable premium tax or other applicable tax, less withdrawals and applicable early withdrawal charges and plus interest credited.						
	<b>Indexed strategy value:</b> At the end of a Term, unless you have made a Performance Lock election, the value of an Indexed Strategy is equal to:						
	<ul> <li>the Investment Base at the end of the Term (after Daily Charges have been deducted); plus</li> </ul>						
	<ul> <li>any net increase for a rise in the Index for the Term (measured at the start and end of the Term); or minus</li> </ul>						
	<ul> <li>any net decrease for a fall in the Index for the Term (measured at the start and end of the Term).</li> </ul>						
	In this formula, the Investment Base at the end of the Term is equal to the amount applied to the Strategy at the start of that Term, reduced by Daily Charges, and reduced proportionally for each withdrawal and related Early Withdrawal Charge that you took during that Term. After we calculate the Investment Base at the end of the Term, we calculate any increase for a rise in the Index over that Term or any decrease for a fall in the Index over that Term. Any increase for the Term is subject to the Cap or Upside Participation Rate for that Term. Any decrease for the Term is subject to the Downside Participation Rate, Floor or Buffer.						

#### INDEXED STRATEGIES

Upon issue, the owner selects from indexed strategies. At the end of each term, the owner has the opportunity to reallocate funds among the available strategies. To reallocate funds, the owner must submit a strategy selection form prior to the end of that term. Unless the owner reallocates funds at the end of a term, funds are automatically applied to the same strategy for the next term. Available strategies are subject to change at any time for new sales. Indexed strategies include:

Each indexed strategy provides returns based, in part, on the change in the price of a specific Index or ETF: the S&P 500<sup>®</sup> Index (SPX), the iShares MSCI EAFE ETF (EFA), the iShares U.S. Real Estate ETF (IYR), or the SPDR Gold Shares ETF (GLD). The price change does not include dividends that might be paid on the underlying investments of the Index or ETF.

Strategies linked to the First Trust Barclays Edge Index (FTEDGE7) provide returns based, in part, on the change in net asset value of the underlying investments of the Index. The net asset value change includes dividends that might be paid on the underlying investments of the Index.

Not all strategies available with all indexes and ETFs.

The S&P 500 6-Year 10% Buffer with Upside Participation Rate Strategy is only available for a term that starts in the first contract year. If the owner does not reallocate at the end of the term, then we will apply the ending value of that strategy to a new term of the S&P 500 1-year 50% Downside Participation Rate with Upside Participation Rate Strategy.

The value of an indexed strategy will increase if there is a positive change in the applicable index value during a term. Any increase during a term is limited by either a cap or an upside participation rate. We can change the cap or upside participation rate for each new term of an indexed strategy.

The value of a 50% downside participation rate strategy will decrease if there is a negative change in the applicable index value during a term. At maximum, this strategy protects against 50% of index losses at the end of a term. Clients assume the other 50% of index losses.

The value of a 10% buffer strategy may decrease if there is a negative change in the applicable index value during a term. At maximum, this strategy protects against the first 10% of index losses at the end of a term. Clients assume any losses in excess of the buffer.

The value of a -10% floor strategy will decrease if there is a negative change in the applicable index value during a term. This strategy protects against losses in excess of 10%, meaning any decrease during a term is limited to -10%.

The value of a 0% floor strategy will not decrease, even if there is a negative change in the applicable index value during a term.

For information on indexed strategy values before the end of a term, please see the product prospectus at MassMutualAscend.com/RILArates.

Strategy and performance lock availability may vary by state and by distribution. For current state approvals of newly added strategies and performance lock, please visit MMAscendConnect.com/2023RILAapprovals.

After the first contract year, 10% of the account value on the most recent contract anniversary may be withdrawn without an early withdrawal charge. The sum of all previous withdrawals during the same contract year will be subtracted to determine the amount available. This free withdrawal allowance is not cumulative, and unused amounts do not carry over to the next contract year. Withdrawals from an annuity contract may have tax consequences.							

EARLY WITHDRAWAL	An early withdrawal charge is applied to surrenders and withdrawals that exceed the penalty- free withdrawal allowance during the first six contract years.									
CHARGE	CONTRACT YEAR	1	2	3	4	5	6	7+		
	EARLY WITHDRAWAL CHARGE	9%	8%	7%	6%	5%	4%	0%		
EXTENDED CARE WAIVER RIDER	To help ease the strain of certain unforeseen events, an extended care waiver is available for no additional charge. If the owner is confined to a nursing home or other long-term care facility after the completion of the first contract year for at least 90 consecutive days, early withdrawal charges may be waived on withdrawals up to a full surrender.									
	Not available in Massachusetts. In California, the Extended Care Waiver Rider has been replaced with the Waiver of Early Withdrawal Charges for Facility Care or Home Care or Community-Based Services Rider, which provides for a waiver of early withdrawal charges under an expanded variety of circumstances.									
TERMINAL ILLNESS WAIVER RIDER	Provided that the diagnosis is rendered more than one year after the contract effective date, up to 100% of the account value can be withdrawn without deduction of an early withdrawal charge if the owner or joint owner is diagnosed by a physician as having a terminal illness with a prognosis of 12 months or less.									
	This waiver may be used only once. Not available in Massachusetts.									
SURRENDER VALUE	The surrender value equals the account value, less any applicable early withdrawal charges.									
PAYOUT OPTIONS	The following options are available following the first contract year: fixed period payout, life payout, life payout, life payout, life payout with payments for at least a fixed period, and joint and one-half survivor payout.									
DEATH BENEFIT VALUE	The death benefit amount is the greater of the account value or the purchase payments, reduced proportionally for all withdrawals, but not including amounts applied to pay early withdrawal charges. In either case, it is reduced by premium tax or other taxes not previously deducted.									
PREMIUM TAX	·· ···· ······························									
If a death benefit is paid under a payout option, premium tax will be deducted if lives in a state that has a premium tax on annuitizations.
